

## Silencers

# Series S

The silencers metal wire stainless steel, bronze, brass, bronze powder and stainless steel are produced in Italy in accordance with ISO 9002 and are the solution to every need, from the purification of fluids (liquids and gases) to shock and noise absorption of liquids and gases.

## Technical sheet

<b>FLUIDS</b>		Liquids and gases, compressed air (for information please contact our technical Dept.)
<b>APPLICATIONS</b>		Pneumatic equipment, filtration systems, reduction, abatement and protection related to the use of fluids.
<b>SUGGESTED TUBES</b>		Normally not applied directly to pipes, however defined according to the applications.
<b>TEMPERATURE AND PRESSURE</b>		In pneumatic applications they follow the requirements of other similar components, such as fittings, the salient element, the maximum noise level, is anyway determined at 4 and 6 bar.
<b>THREAD TYPE</b>		BSP pipe thread no nickel
<b>MATERIALS</b>	<b>Bodies</b>	Brass, stainless steel AISI 304, AISI 316, copper-plated steel, acetal resin and nylon
	<b>Seals</b>	Acetal resin and nylon AISI 304, AISI 316
	<b>Filters</b>	Sintered bronze

## Additional technical informations

All silencers for air compressed illustrated ON the catalog have been classified according to objective evidence got as a result of flow tests and noise tests to which they were subjected by the manufacturer. The flow tests were carried out by varying the pressure upstream via the pressure regulator. The noise tests have been performed in the work environment at two pressure levels: 6 bar and 4 bar.

As an example is shown below the flow chart for the model SFE18 and a summary table of the levels of noise measured at a pressure of 6 bar on the main models (consider that at 4 bar such values fall on average values of about 3-6% depending on the model and size).

Model	Noise level at 6 BAR (dB)
